FREQUENCY PERFORMANCE
State of the Art thin film high frequency chip resistors are produced with a tantalum-nitride based resistor element that is extremely stable with time, temperature, and frequency. The chips perform well over a wide frequency range, exhibiting low VSWR response from DC to 20 GHz and higher. Solderable terminations allow the chips to be reflowed or hand soldered into microwave circuits easily while maintaining excellent return loss characteristics. Parasitic reactance is very low for these chips with capacitance being typically less than 0.1 pF.

TYPICAL LIFE PERFORMANCE
Parts are solder mounted on Fr4 board and tested at 70°C. Power is applied for 90 minutes on and 30 minutes off at a rate that achieves a film temperature 30°C above ambient.
